INSTRUCTIONS FOR COLLECTING SAMPLES OF WATER FOR CHEMICAL ANALYSIS.

1. Use a Winchester bottle with glass stopper, having a capacity of half a gallon. If such bottles cannot be had take four pint bottles with glass stoppers. If glass stoppers cannot be procured use *new* well fitting corks. Never use old dirty corks.

2. The bottles should be first cleaned with a little hydrochloric or sulphuric acid and then rinsed out with distilled water or with the water to be examined at least three times.

3. In taking samples from streams, tanks or reservoirs the bottle should be submerged with its stopper and the stopper withdrawn 12 inches or more below the surface of the water. After the bottle is quite-full re-place the stopper before withdrawing the bottle from the water. Pour off just sufficient water so that a little air space is left under the stopper.

4. No saw dust or other packing material should be kept over the stopper. Prior to packing, a clean piece of cloth should be tied round the mouth of the bottle secured with string and sealed over the knot.
